The Journal of Bacteriology, a publication of the American Society for Microbiology. 1931 I St., N.W., Washington, D.C. 20006, is devoted to the advancement and dissemination of fundamental knowledge concerning bacteria and other microorganisms. The Journal is published monthly, and the twelve numbers are divided into four volumes per year. The nonmember subscription price is $90 per year. Single copies are $8. The member subscription price is $17 per year. Correspondence relating to subscriptions, reprints, defective copies, availability of back issues, lost or late proofs, disposition of submitted manuscripts, and general editorial matters should be directed to the ASM Publications Office, 1931 I St., N.W., Washington, D.C. 20006 (area 202 833-9680).

INSTRUCTIONS TO AUTHORS

Submit manuscripts in duplicate (original and one copy) to ASM Publications Office, 1913 I St., N.W., Washington, D.C. 20006.

General policy. Any manuscript submitted must be a report of unpublished original research, which is not being considered for publication elsewhere. Each manuscript should present the results of an independent, cohesive study; numbered series papers are discouraged. Papers that deal primarily with a method should not be submitted.

The "editorial style" of the Journal essentially follows the CBE Style Manual (3rd ed., AIBS, 1972). For bacterial genetic systems, the recommendations of Demerec et al. (Genetics 54:61, 1966) should be followed, with the limited modifications of Taylor and Trotter, Sanderson, and Low (Bacteriol. Rev. 36:504-524, 558-586; and 587-607, 1972). For yeast, Chlamydomonas, and several fungal species, symbols such as those given in Handbook of Microbiology (1974, A. I. Laskin and H. A. Lechevalier, eds., CRC Press, Cleveland, p. 665-711, Vol. IV) should be employed. For genetic nomenclature, use italics consistently for genotype symbols. Greater leniency can be allowed for phenotypic symbols. However, they should not be italicized. The preferred convention is to use the same three-letter symbols in Roman type with the first letter capitalized.

Biochemical nomenclature, including abbreviations and symbols, should follow the recommendations of the IUPAC-IUB Commission on Biochemical Nomenclature (CBN) and the Instructions to Authors of J. Biol. Chem. and Arch. Biochem. Biophys. (first issue of each year), which are based upon the CBN Recommendations and contain a list thereof. Reprints of these Recommendations and advice on biochemical and chemical nomenclature are available from the NRC Office of Biochemical Nomenclature (W. E. Cohn, Director), Biology Division, Oak Ridge Nat'l. Lab., Box Y, Oak Ridge, Tenn. 37830 (phone: 615-483-8611, Ext. 3-7514). Normally, abbreviations (except those of standard units of measurement and symbols of the elements) should be defined and introduced parenthetically at first use in the text. Enzyme activities should be expressed in the terms set out in CBN's Enzyme Nomenclature (1972) (Elsevier Scientific Publishing Co.). Lengths, weights, volumes, and molarities should make use of the prefixes m, μ, n, and p (for 10^-3, 10^-6, 10^-9, and 10^-12, respectively), where applicable, avoiding such compound prefixes as mm and μμ. Metric units should be employed as much as possible. The Editors reserve the privilege of editing manuscripts to make them conform to the above-mentioned stylistic conventions. As a rule, all bacterial growth curves should be presented as semilogarithmic plots (log × vs. time).

Form of manuscript. All parts of the manuscript should be typed double-space or, preferably, triple-space. Most manuscripts can and should be divided into the following sections: Abstract, Introduction, Materials and Methods, Results, Discussion, Acknowledgments, and Literature Cited.

Title. A single statement of the subject of a paper is preferred to a main title-subtitle arrangement. A short version of the title (no more than 46 characters and spaces) should be supplied for use as a running head.

Abstract. An Abstract appears at the beginning of each paper in the Journal. The Abstract should not exceed 250 words.

Literature Cited. In the text, references are cited by number. The Literature Cited section should be typed in alphabetical order, by first author, and numbered. Each reference should include the title of the article and inclusive pagination. Names of journals are abbreviated according to Bibliographic Guide for Editors & Authors (American Chemical Society, 1974). Citations of abstracts, theses, "unpublished data," "personal communication," and "in press" will not be accepted in the Literature Cited.

Tables. Each table should be typed on a separate page. The data should be arranged so that columns of like material read down, not across. Explanatory footnotes are permitted, but detailed descriptions of the experiments are not. The materials and methods used to gain the data should properly remain in the section of that name. Figures of complete set of figures, preferably glossy photographs, should accompany each of the two copies of the manuscript. Graphs (submit as photographs) should be finished drawings not needing further artwork or type-setting. Absolutely no part of a graph should be typewritten (except the legend, which should be typed on a separate page). Most graphs will be reduced to one-column width, and all elements in the drawing should be prepared to withstand this reduction. The legend of the figure should provide enough information so that the figure is understandable without reference to the text. Experimental details from Materials and Methods should not be repeated in figure legends. Figure ordinate and abscissa scales, and table column headings, should avoid ambiguous use of numbers with exponents (see p. 140, CBE Style Manual).

Nomenclature of microorganisms. In general, the nomenclature presented in Bergey's Manual of Determinative Bacteriology (8th ed., 1974) is used. If an author challenges this nomenclature, his own judgment will be followed, but the name in Bergey's Manual should follow in parentheses the first time the name is used in the text and in the Abstract. Papers which include extensive taxonomic material (e.g., description of new taxa) will not be published in this journal. The proper place for publication of taxonomic material is the International Journal of Systematic Bacteriology (IJISB), which is published by the ASM for the International Association of Microbiological Societies. If the main thrust of such a paper is not taxonomy, the paper should be divided, the taxonomy portion being submitted to IJISB and the other portion to this journal.

Notes. The accepted form for Notes is somewhat different from the foregoing. Contributors should consult a recent issue of the Journal for style. Notes should not exceed 500 words. The Abstract should not exceed 25 words.

Copyright. Once a paper has been published in the Journal, which is a copyrighted publication, the legal ownership of all parts of the paper, including the illustrations, has passed from the author to the ASM. If the same author, or any author, wishes to republish material previously published in the Journal, he must first receive written permission from ASM.
EXECUTIVE OFFICER—American Society of Biological Chemists to assist the officers and council of the Society in managing the Society's administrative matters; responsibilities include: administration of financial affairs of the society, participation in the society publication operations, organization of the annual meeting, and liaison with National and International organizations. Administrative/managerial ability essential; candidates with experience in scientific administration are preferred.

Salary open; excellent fringe benefits. Please send resume to Mr. Richard Snyder, c/o American Society of Biological Chemists, 9650 Rockville Pike, Bethesda, Maryland 20014.
