GUEST COMMENTARY

A Galvanizing Story—Protein Stability and Zinc Homeostasis

Peter T. Chivers

2953–2954

STRUCTURAL BIOLOGY

Role of the PDZ Domains in *Escherichia coli* DegP Protein

Jack Iwanczyk, Daniela Damjanovic, Joel Kooistra, Vivian Leong, Ahmad Jomaa, Rodolfo Ghirlando, and Joaquin Ortega

3176–3186

The Crystal Structure of *Bacillus subtilis* YycI Reveals a Common Fold for Two Members of an Unusual Class of Sensor Histidine Kinase Regulatory Proteins

Eugenio Santelli, Robert C. Liddington, Michael A. Mohan, James A. Hoch, and Hendrik Szymant

3290–3295

GENOMICS AND PROTEOMICS

Genome of the Opportunistic Pathogen *Streptococcus sanguinis*

Ping Xu, Joao M. Alves, Todd Kitten, Arunsri Brown, Zhenming Chen, Luiz S. Ozaki, Patricio Manque, Xiuchun Ge, Myrna G. Serrano, Daniela Puiu, Stephanie Hendricks, Yingping Wang, Michael D. Chaplin, Doruk Akan, Sehmi Paik, Darrell L. Peterson, Francis L. Macrina, and Gregory A. Buck

3166–3175

Identification of Major Sporulation Proteins of *Myxococcus xanthus* Using a Proteomic Approach

John L. Dahl, Farah K. Tengra, David Dutton, Jinyuan Yan, Tracy M. Andacht, Lia Coyne, Veronica Windell, and Anthony G. Garza

3187–3197

The Genome Sequence of Avian Pathogenic *Escherichia coli* Strain O1:K1:H7 Shares Strong Similarities with Human Extraintestinal Pathogenic *E. coli* Genomes

Timothy J. Johnson, Subhashinie Kariyawasam, Yvonne Wannemuehler, Paul Mangiamele, Sara J. Johnson, Curt Doetkott, Jerod A. Skyberg, Aaron M. Lynne, James R. Johnson, and Lisa K. Nolan

3228–3236

Complete Genome Sequence of the Prototype Lactic Acid Bacterium *Lactococcus lactis* subsp. *cremoris* MG1363

Udo Wegmann, Mary O'Connell-Motherway, Aldert Zomer, Girbe Buist, Claire Shearman, Carlos Canchaya, Marco Ventura, Alexander Goesmann, Michael J. Gasson, Oscar P. Kuipers, Douwe van Sinderen, and Jan Kok

3256–3270

Microarray Analysis of Transposon Insertion Mutations in *Bacillus anthracis*: Global Identification of Genes Required for Sporulation and Germination

William A. Day, Jr., Suzanne L. Rasmussen, Beth M. Carpenter, Scott N. Peterson, and Arthur M. Friedlander

3296–3301

MOLECULAR BIOLOGY OF PATHOGENS

Physiological Effects of Crl in *Salmonella* Are Modulated by σ^S Level and Promoter Specificity

Véronique Robbe-Saule, Miguel Dias Lopes, Annie Kolb, and Françoise Norel

2976–2987

Continued on following page

Intermolecular Forces and Enthalpies in the Adhesion of <i>Streptococcus mutans</i> and an Antigen I/II-Deficient Mutant to Laminin Films	Henk J. Busscher, Betsy van de Belt-Gritter, Rene J. B. Dijkstra, Willem Norde, Fernanda C. Petersen, Anne A. Scheie, and Henny C. van der Mei	2988–2995
Characterization of the Proteasome Accessory Factor (<i>paf</i>) Operon in <i>Mycobacterium tuberculosis</i>	Richard A. Festa, Michael J. Pearce, and K. Heran Darwin	3044–3050
Sortase-Catalyzed Assembly of Distinct Heteromeric Fimbriae in <i>Actinomyces naeslundii</i>	Arunima Mishra, Asis Das, John O. Cisar, and Hung Ton-That	3156–3165
<i>pilQ</i> Missense Mutations Have Diverse Effects on PilQ Multimer Formation, Piliation, and Pilus Function in <i>Neisseria gonorrhoeae</i>	R. Allen Helm, Michelle M. Barnhart, and H. Steven Seifert	3198–3207
Cytosolic Proteins Contribute to Surface Plasminogen Recruitment of <i>Neisseria meningitidis</i>	Andreas Knaust, Martin V. R. Weber, Sven Hammerschmidt, Simone Bergmann, Matthias Frosch, and Oliver Kurzai	3246–3255
BACTERIOPHAGES, TRANSPOSONS, AND PLASMIDS		
Region-Specific Insertion of Transposons in Combination with Selection for High Plasmid Transferability and Stability Accounts for the Structural Similarity of IncP-1 Plasmids	Masahiro Sota, Masataka Tsuda, Hirokazu Yano, Haruo Suzuki, Larry J. Forney, and Eva M. Top	3091–3098
Effect of Salt Shock on Stability of λ^{imm434} Lysogens	Paul Shkilnyj and Gerald B. Koudelka	3115–3123
The SXT/R391 Family of Integrative Conjugative Elements Is Composed of Two Exclusion Groups	Joeli Marrero and Matthew K. Waldor	3302–3305
SIGNAL TRANSDUCTION		
YycH and YycI Interact To Regulate the Essential YycFG Two-Component System in <i>Bacillus subtilis</i>	Hendrik Szurmant, Michael A. Mohan, P. Michael Imus, and James A. Hoch	3280–3289
MICROBIAL COMMUNITIES AND INTERACTIONS		
<i>Streptococcus gordonii</i> Hsa Environmentally Constrains Competitive Binding by <i>Streptococcus sanguinis</i> to Saliva-Coated Hydroxyapatite	Angela H. Nobbs, Yongshu Zhang, Ali Khammanivong, and Mark C. Herzberg	3106–3114
GENE REGULATION		
The DeoR-Type Regulator SugR Represses Expression of <i>ptsG</i> in <i>Corynebacterium glutamicum</i>	Verena Engels and Volker F. Wendisch	2955–2966
The Transcriptional Regulators NorG and MgrA Modulate Resistance to both Quinolones and β-Lactams in <i>Staphylococcus aureus</i>	Que Chi Truong-Bolduc and David C. Hooper	2996–3005
Ligand-Controlled Proteolysis of the <i>Escherichia coli</i> Transcriptional Regulator ZntR	Mihaela Pruteanu, Saskia B. Neher, and Tania A. Baker	3017–3025
Contributions of [4Fe-4S]-FNR and Integration Host Factor to <i>fnr</i> Transcriptional Regulation	Erin L. Mettert and Patricia J. Kiley	3036–3043
MICROBIAL CELL BIOLOGY		
Species-Specific Functioning of the <i>Pseudomonas</i> XcpQ Secretin: Role for the C-Terminal Homology Domain and Lipopolysaccharide	Wilbert Bitter, Ria van Boxel, Mathijs Groeneweg, Patricia Sánchez Carballo, Ulrich Zähringer, Jan Tommassen, and Margot Koster	2967–2975

Interaction between Cell Division Proteins FtsE and FtsZ	Brian D. Corbin, Yipeng Wang, Tushar K. Beuria, and William Margolin	3026–3035
Cross Talk between Type III Secretion and Flagellar Assembly Systems in <i>Pseudomonas aeruginosa</i>	Chantal Soscia, Abderrahman Hachani, Alain Bernadac, Alain Filloux, and Sophie Bleves	3124–3132
A Complete Set of Flagellar Genes Acquired by Horizontal Transfer Coexists with the Endogenous Flagellar System in <i>Rhodobacter sphaeroides</i>	Sebastian Poggio, Cei Abreu- Goodger, Salvador Fabela, Aurora Osorio, Georges Dreyfus, Pablo Vinuesa, and Laura Camarena	3208–3216
PLANT MICROBIOLOGY		
A <i>pthA</i> Homolog from <i>Xanthomonas axonopodis</i> pv. <i>citri</i> Responsible for Host-Specific Suppression of Virulence	Hiroshi Shiotani, Takashi Fujikawa, Hiromichi Ishihara, Sinji Tsuyumu, and Katsumi Ozaki	3271–3279
GENETICS AND MOLECULAR BIOLOGY		
Expression of the <i>bviIR</i> and <i>cepIR</i> Quorum-Sensing Systems of <i>Burkholderia vietnamiensis</i>	Rebecca J. Malott and Pamela A. Sokol	3006–3016
YcfR (BhsA) Influences <i>Escherichia coli</i> Biofilm Formation through Stress Response and Surface Hydrophobicity	Xue-Song Zhang, Rodolfo García- Contreras, and Thomas K. Wood	3051–3062
Mechanisms of Adaptation to Nitrosative Stress in <i>Bacillus subtilis</i>	Annika Rogstam, Jonas T. Larsson, Peter Kjelgaard, and Claes von Wachenfeldt	3063–3071
Lipolytic Enzymes in <i>Myxococcus xanthus</i>	Aurelio Moraleta-Muñoz and Lawrence J. Shimkets	3072–3080
Ribosomal Features Essential for <i>tna</i> Operon Induction: Tryptophan Binding at the Peptidyl Transferase Center	Luis R. Cruz-Vera, Aaron New, Catherine Squires, and Charles Yanofsky	3140–3146
Ribosome Recycling Factor and Release Factor 3 Action Promotes TnaC-Peptidyl-tRNA Dropoff and Relieves Ribosome Stalling during Tryptophan Induction of <i>tna</i> Operon Expression in <i>Escherichia coli</i>	Ming Gong, Luis R. Cruz-Vera, and Charles Yanofsky	3147–3155
Characterization of the Variants, Flanking Genes, and Promoter Activity of the <i>Leifsonia xyli</i> subsp. <i>cynodontis</i> Insertion Sequence IS1237	Hui Lin, Tai-Yuan Li, Mao-Hua Xie, and Yi Zhang	3217–3227
Role of DNA Repair by Nonhomologous-End Joining in <i>Bacillus subtilis</i> Spore Resistance to Extreme Dryness, Mono- and Polychromatic UV, and Ionizing Radiation	Ralf Moeller, Erko Stackebrandt, Günther Reitz, Thomas Berger, Petra Rettberg, Aidan J. Doherty, Gerda Horneck, and Wayne L. Nicholson	3306–3311
Isolation of the <i>rstA</i> Gene as a Multicopy Suppressor of YjeE, an Essential ATPase of Unknown Function in <i>Escherichia coli</i>	Tracey L. Campbell, Claudia S. Ederer, Abdellah Allali-Hassani, and Eric D. Brown	3318–3321
PHYSIOLOGY AND METABOLISM		
Catalytic Properties of <i>Staphylococcus aureus</i> and <i>Bacillus</i> Members of the Secondary Cation/Proton Antiporter-3 (Mrp) Family Are Revealed by an Optimized Assay in an <i>Escherichia coli</i> Host	Talia H. Swartz, Masahiro Ito, Takayuki Ohira, Shinsuke Natsui, David B. Hicks, and Terry A. Krulwich	3081–3090
Influence of Amino Acids on Low-Density <i>Escherichia coli</i> Responses to Nutrient Downshifts	Sergio Bodini, Luisa Nunziangeli, and Francesca Santori	3099–3105
Performance of the Translational Apparatus Varies with the Ecological Strategies of Bacteria	Les Dethlefsen and Thomas M. Schmidt	3237–3245

Cover photograph (Copyright © 2007, American Society for Microbiology. All Rights Reserved.): The gram-negative, soil-dwelling microbe *Myxococcus xanthus* is capable of coordinated aggregation into clusters of cells called fruiting bodies. Inside these aggregates bacillus-shaped vegetative cells become coccus-shaped spores. Shown is a false-colored, scanning electron micrograph of an aerial view of a 5-day-old fruiting body on starvation agar. Spores appear to be covered in a gossamer-like sheet that is ripped in several places. Magnification, ×1,100. (See related article on page 3187.)
