Cover photograph: Kymograph of progressive nucleoid segregation in a wild-type *Escherichia coli* cell growing in rich medium on an agarose support at 37°C. Nucleoids were visualized by tagging the nucleoid-associated protein HU with the fluorescent protein mCherry. Time increases from top to bottom in the image. The x axis represents distance, with the center of the image marking the center of the cell. There are 20 images combined in the kymograph, each separated by 2 min. (See related article at e00563-18.) (Copyright © 2019 American Society for Microbiology. All Rights Reserved.)
